## Flat Panel Television

Sit back, relax and enjoy the performance. The better the technology, the better the experience. Hitachi's flat screen TVs quite simply make life more beautiful. The full range of Plasma and LCD TVs offers you a wealth of options for your home.

## Plasma and LCD

The films you enjoy, the games you play, the work you do – compromise just isn't an option. Exactly the same goes for your flat panel display.

Everyone is different. Hitachi flat panel displays are designed with that in mind. Whether it's Plasma or LCD you're looking for, we have the perfect option to fit into your life. Both technologies offer the same outstanding performance, crystal clear images and awe-inspiring sound. But Plasma and LCD have unique characteristics that make them suited to different situations.

For the busy professional on the go, someone who needs to catch the headlines on their way out to work, LCD TVs are the ideal choice. Optimum viewing performance combines with smaller screen size to make the LCD particularly well suited for the bedroom or kitchen. As they're smaller, LCD displays are ideal for when you need to get close to the screen. They can also be used as a monitor for your PC needs.

Plasma displays are generally larger, coming in sizes up to a sensational 141cm visible (55PD5200). You can make a bigger impact with your home entertainment system. With a wide viewing angle, you get the same superb image wherever you are in the room – so no-one misses a single detail of their favourite programme or movie.

Ideal for wall mounting, our Plasma and LCD flat panel displays are the perfect addition to any living environment – and our cutting-edge designs make them a feature of which you can be truly proud.

However you live your life, we've got the TV to fit.

## Your TV, your lifestyle

Wherever you put it in your home, whether it's switched on or off, a Hitachi flat panel TV will look fantastic. Award-winning design on the outside lives up to the ground-breaking technology inside.

# Your lifestyle, your TV

Hitachi's flat screen TVs are designed to fit in with your life. With the range of TVs on offer, you don't have to compromise on functionality or looks.

Keep up with your favourite programme while preparing a meal. Flat panel TVs are so slim and compact, you can fit a bigger screen than you thought into a smaller space.

Advanced technology means that wanting the full home cinema experience doesn't have to take up half your living room. Plasma technology enables the creation of slender, lightweight TVs that can be hung on the wall like a picture.

The range and number of connections means you can plug whatever you want into your TV, from DVD Recorders to set-top boxes to a PC.

## Picture perfect

### PICTURE MASTER

PICTURE MASTER Technology is the power behind the amazing pictures you see on our PICTURE MASTER range of flat panel TVs (42PD7500, 42PD7200 and 32LD7200). Like all the best ideas, it's easily explained.

The H<sup>4</sup> Plasma Panel and IPS LCD Panel are the 'canvas' on which the picture is drawn. The pixels are the 'paint' which is used to draw the picture. PICTURE MASTER Technology acts like a 'brain' to continuously monitor the picture, using histogram analysis, and making adjustments in real time to provide you with optimum picture performance. It is the 'thinking' behind every single scene.

Continual histogram analysis of each scene allows TVs with PICTURE MASTER Technology to control and adapt the gamma/contrast level of the scene in real time, as well as performing image enhancement, ensuring that what you see on the screen is the best possible picture.

In addition, the advanced ALIS Plasma Panel from Hitachi is the first in the industry to offer a 1200cd/m<sup>2</sup> (42PD7500 and 42PD7200) phosphor spread area, resulting in a much brighter panel. What's more, the lighting efficiency of blue and green within the panel display have been radically improved, and the newly developed Dynamic MBP filter brings new levels of control to the management of panel brightness, whilst improving the reproduction of black.

Bringing all these technological advances together, PICTURE MASTER Technology from Hitachi means your TV benefits from improved contrast, less visual noise in dark scenes, much sharper edges – and up to a staggering 68.6 billion colours. This combination of features means Hitachi Plasma and LCD flat panel displays offer you the highest available picture quality – perfect for DVD, games and the future of High Definition TV.

# HD ready

## The power of the future – today

### HDTV

High Definition Television (HDTV) is a revolution about to be unleashed on the world of broadcasting. Bringing much higher picture quality, you've never had it – or seen it – so good.

Starting in Europe in 2006, HDTV will offer the best TV picture quality ever seen. At present, most people use either an analogue signal or a standard definition digital signal (SDTV) to receive broadcast television. HDTV will be a step beyond even the great improvement of digital SDTV.

While there is still some discussion about what is true HDTV, it's generally accepted that 1,080-line interlaced (1080i) or 720-line progressive (720p) are considered as HDTV. As a result HDTV uses many more pixels than present services offer, creating the strongest and most detailed TV image you can have. It's even sharper than a DVD is at present.

The majority of Plasma Televisions sold today are not HDTV ready. But thanks to Plasma and LCD technology from Hitachi, you can now future-proof your purchase by choosing a TV that is fully compatible with the new standard. Only HDTV ready panels such as ours will be capable of displaying high definition digital sources.

Thanks to our revolutionary flat screen technology, Hitachi flat panel displays are the ideal choice if you're thinking of investing in a TV today. You need a display that's ready to cope with the extra demands that HDTV puts on your equipment.

Home entertainment is an investment that should last. With an expected lifespan of up to 60,000 hours, Hitachi flat panel displays will be making a real difference to your life for many years to come. Embrace the future of HDTV today.

### I<sup>3</sup> Improved Intelligent Image chip

Hitachi's uncompromising approach to visual excellence extends to the very heart of our flat panel TVs. Our new I<sup>3</sup> (Improved Intelligent Image chip) processor works non-stop to bring you optimised picture quality, whatever the source. In fact, the chip reduces visible video signal conversion artefacts from every kind of signal – including High Definition – to create unparalleled levels of contrast.

What's more, I<sup>3</sup> provides cinema-like motion video quality from every type of video source material. Its advanced 3D Comb Filter removes picture colour interference and combines with our proprietary high quality picture digital processing to give crisper, sharper pictures whatever the action.

I<sup>3</sup>'s Advanced Digital Colour Management means you see vivid colour, with dynamic skin-colour correction and white balance control.

The result? Truly breathtaking visuals, bringing you closer than ever to the action.

### 3DS

Wirefree home cinema. The stuff of dreams is now a reality, with Hitachi's advanced 3DS (3 Dimensional Spatial Sound) process. Advanced audio algorithms give the listener the surround sound feel – without the need for extra speakers or wires. With 3DS you can have cinema acoustics in your living room without compromising your living space.

# 55PD5200 Plasma TV

We believe that when it comes to home entertainment, nothing less than the very best will do. Hitachi flat panel displays are designed to fit right in with your life. That's why the 55PD5200 is a Plasma TV that has no compromises.

Home entertainment systems are a purchase no-one makes lightly. With technology developing all the time, you need to know that your investment is protected against whatever changes may come.

The 55PD5200 – our flagship 141cm visible Plasma TV – combines the latest PICTURE MASTER Technology with HDTV compatibility\*, so you'll benefit from the very best in broadcasting as soon as it becomes available.

With an expected lifespan of up to 60,000 hours, the 55PD5200 offers an average of 20 years' viewing time – giving you an even better return on your investment.

The 55PD5200 makes the ultimate design statement. Sleek and slender, it will attract admiring looks whether it's turned on or off. The simplicity and sophistication of the design work perfectly in any environment. You can be sure that – no matter how tastes change – your Plasma TV will still fit your life perfectly.

\* HD compatible (DVI socket supports 1080i 50/60 and 720p 50/60. Y'Pb'Pr' supports 1080i 50/60 and 720p 60)

## No compromise

Flat panel displays from Hitachi make a powerful statement about the way you live your life.

Sleek and sophisticated, the 55PD5200 comes with our PICTURE MASTER Technology to ensure an unparalleled viewing experience.

# PICTURE MASTER Technology

Hitachi's PICTURE MASTER Technology, like all the best ideas, is easily explained. But behind the elegant simplicity of our flat panel TVs, there's a whole lot going on.

Hitachi is leading the way in the flat panel industry worldwide with the PICTURE MASTER system, which has been specifically designed to get the very best from our high quality Plasma and LCD panels.

PICTURE MASTER uniquely combines industry-leading technology with sophisticated process engineering. Simultaneous hi-tech processes work together to guarantee a startling leap forward in picture quality.

It all begins with **Full Digital Signal Processing and Scaling**. Every single picture treatment is made digitally: even incoming analogue signals are converted to digital. Some conventional TVs can cause noise and image signal degradation as they enhance the picture. But Hitachi's technology does away with this, and ensures that the signal remains pure and clean all through the picture enhancement process.

Then there's the **High Quality Digital Image Pixel Processing Technology**, which analyses in detail each pixel in every image signal. This uses two hi-tech chips working together to handle the full digitising process.

Firstly, the new **1024 Progressive Processing** system upscales incoming signals, ensuring that the incoming material is adapted for optimal display on our high definition panels. This is combined with an advanced **3D Comb Filter** to add extra pixels and create unparalleled levels of sharpness and detail.

This capability means that our panels are ready for the next generation of **high definition TV** (HDTV), which begins European transmission in 2006. HDTV will be a massive leap forward in

picture quality, with a huge increase in pixel information. Hitachi have therefore future-proofed their PICTURE MASTER TVs. So you can be safe in the knowledge that Hitachi flat panel technology is durable as well as elegant.

The second chip, carrying out the **Super Dynamic Contrast** function, is designed to make the most of challenging light conditions. It deals with low light in incoming signals, but also in the ambient lighting conditions where the panel is situated. It analyses pictures and carries out adjustments to improve signal quality. This then means that picture quality in dark scenes is enhanced and the panel displays deeper and richer blacks.

What's more, every PICTURE MASTER TV also offers unparalleled colour reproduction. The cutting-edge virtual 12-bit **Advanced Digital Colour Management** reproduces 4,093 gradations per colour, giving our Plasma TVs the ability to display an extraordinary 68.6 billion colours. Our LCD TVs can achieve 1.06 billion colours using 10-bit **Advanced Digital Colour Management**.

Finally, there's the **High Quality Video Motion** processing system. Previous-generation flat screens often suffered from blurring effects, but Hitachi technology ensures that all the on-screen motion looks absolutely natural, smooth and sharp. To manage the fine detail and massive number of extra pixels created by PICTURE MASTER, our panels use a **High Speed Calculation** process. This controls the frame of every picture and manages the movement of every single on-screen pixel to avoid any blurring.

This combination of Hitachi's unique technologies gives our 7000 Series state-of-the-art picture quality, setting new standards in picture resolution.

- XGA and VGA are registered trademarks of IBM Corp. Macintosh is a registered trademark of Apple Computer, Inc. All other brand names and product names are trademarks, registered trademarks or trade names of their respective holders. TRUBASS is a registered trademark of SRS Laboratories.
- When a plasma display is turned on, minute dots light up on the screen. Please be aware that some parts of the screen may not light, while in other parts dots will always light. This is normal and is not a malfunction.
- To prevent overheating of the plasma panel an air cooling system is used. To assure proper operation of this system, the plasma display should be installed and operated in a vertical position. If the display is installed horizontally or at an excessive angle, heat may not be effectively dissipated and overheating could occur. This could lead to a malfunction.
- All on-screen images shown in this catalogue are simulated. • Design and specifications are subject to change without notice.
- For vertical installation of plasma please refer to installation booklet for details.
